ABOUT ME

I am a dedicated and motivated individual with a strong foundation in Computer Science and Data Science, Engineering. I possess excellent problem-solving skills, a keen eye for detail, and a passion for learning new technologies. With a basic understanding of Python, MySQL, I am eager to contribute my knowledge and grow in a professional environment. I am committed to delivering high-quality work and collaborating effectively in team settings.

EDUCATION

2022 - 2026	Ballari Institute of Technology and Management, Ballari Bachelor of Engineering in Computer Science and Engineering (DataScience) | CGPA: 8.18 (Till 7th Sem)
2020 - 2022	SARVODAYA SCIENCE PU COLL, NEAR DEGINAL CROSS HORTI, INDI TO VIJAYAPURA DT 586117, PCMB (Percentage:77%)
2017 - 2020	SARVODAYA ENGLISH MEDIUM HIGH SCHOOL HORTI, CHADACHANA EDUCATIONAL RANGE, INDI TO, VIJAYAPURA DT-580212 (Percentage:84.64%

SKILLS

Functional Skills: Teamwork and Collaboration, Adaptability
Programming Languages: Python
Web Dev: HTML, CSS, JavaScript
Data Management: MySQL, Power BI

INTERNSHIPS/ WORKSHOPS

- Python Programming(Duration: Apr 2024- May 2024) : Hands-on training conducted by BITM in collaboration with "EZTS Company".(Topics Covered: Python and DSA) | **LINK**
- Student Development Program on Project Development Methodologies (In Collaboration with IEEE SB) | **LINK**

CERTIFICATIONS

- Google Cloud Career Launchpad generative AI Track | **LINK**
- Getting Started With Enterprise Data Science | **LINK**

PROJECTS

- **DRIVEN ANALYSIS OF MAJOR CROPS OF INDIA: PROFITABILITY AND MARKET ACCESS** | LINK

  The project "DATA DRIVEN ANALYSIS OF MAJOR CROPS OF INDIA" focuses farmers in rural India face challenges in market access and profitability due to poor infrastructure, reliance on middlemen, and inefficiencies in supply chains. Data analytics and dashboard creation can provide insights into market access, price trends, and infrastructure gaps, helping improve farmer income.

- **WINE QUALITY PREDICTION USING MACHINE LEARNING** | LINK

  This project focuses on building a machine-learning model to analyze physicochemical properties of wine and accurately predict its quality. By applying data preprocessing, exploratory data analysis, feature engineering, and multiple ML algorithms, the project demonstrates how data-driven insights can classify wine quality and support quality control processes in the beverage industry.
